Eisenmann GmbH celebrates major milestones:

Successful establishment, positive business development, and groundbreaking ceremony for the new headquarters in Gärtringen

Autumn 2025 marked several significant milestones for Eisenmann GmbH. Following its successful re-establishment in 2020, the Swabian plant engineering company celebrated not only its fifth anniversary at the end of September, but also the groundbreaking ceremony for its new headquarters in Gärtringen – an investment that further underscores its growth strategy.

Hardly had the anniversary celebrations concluded when, on 26 September 2025, management, investors, municipal representatives, and partner companies gathered to mark the official start of construction at the new site in the Riedbrunnen II industrial estate.

Investment of 25 to 30 million euros

By the end of 2026, a modern corporate campus will be built on a site covering 16.000 square meters. The plans include a dedicated technical center for pre-assembly, logistics areas, and a spare parts warehouse measuring 6.500 sqm, including 1.500 sqm allocated to research and development. A carefully designed office concept will transform around 4.500 sqm into flexible team spaces for 250 to 300 employees, providing ample room for collaborative and creative work. An in-house restaurant is also planned to further enhance the working and meeting environment.

Sustainability as a Firmly Established Guiding Principle

Energy efficiency, resource conservation, and climate protection are not only essential pillars of Eisenmann's production solutions; they also play a central role in the new construction project.

The new headquarters will be powered by a photovoltaic system with a minimum capacity of 500 kWp. A total of 25 charging points will ensure the smooth operation of the company's electric vehicle fleet.

By choosing Gärtringen as its new location, remains true to its roots in the Böblingen region, continuing to position itself as an attractive employer in a strong regional business hub. Employees, business partners, and customers alike will benefit from the excellent transport connections of the future headquarters.

Construction is progressing according to schedule, and the relocation of the Eisenmann team to Gärtringen is planned for the end of 2026.

Successful Relaunch and Solid Growth

Since its re-establishment in 2020, Eisenmann GmbH has experienced steady and, above all, stable growth. Today, the plant engineering company employs 230 people in Germany and an additional 70 employees in its international subsidiaries in the USA, Mexico, Italy, Saudi Arabia and Turkey.

Managing Director Matthias Haarer attributes, the company's strong market position primarily to its clear focus on core competencies in Paint & Assembly. With highly innovative technologies and a reliable service and spare parts management offering, Eisenmann quickly secured important projects for automotive industry customers. Combined with a firm commitment to continuously developing the newly founded company, Eisenmann today provides a globally proven product portfolio and cross-industry solutions for diverse processes in paint shop operations.

A projected total output of more than 130 million euros for 2025 validates the decision—both for investors and management—to invest in company-owned premises.

New Brand Identity

Eisenmann is entering the new year with a refreshed brand identity that visually reflects the company's positive development. The claim "We envision solutions" communicates the plant engineering specialist's technological expertise and expresses Eisenmann's ambition to transform challenges into sustainable solutions for its customers.
